ABSTRACT

Key words: methods: numerical – galaxies: formation – galaxies: star clusters: general.

1 INTRODUCTION

Webb et al. (2018) study the effect of a tidal

A similar study was conducted three decades ago, although the scope was tidal disruption of galaxies rather than of globular clusters. (Aguilar & White 1985, 1986)

2 SIMULATIONS

3 RESULTS

4 DISCUSSION

5 CONCLUSIONS

The last numbered section should briefly summarise what has been done, and describe the final conclusions which the authors draw from their work.

ACKNOWLEDGEMENTS

TLRH acknowledges support from the International Max-Planck Research School (IMPRS) on Astrophysics.

The research was conducted using the Python (van Rossum & de Boer 1991) programming language with the IPython (Perez & Granger 2007) environment. We acknowledge the Numpy (van der Walt et al. 2011), Scipy (Jones et al. 2001), and Astropy (Astropy Collaboration et al. 2013) packages. Plots were generated using Matplotlib (Hunter 2007).
